

Powdered Hoodia Cactus (5)

Powdered Hoodia Cactus

100 gm Powdered Hoodia Cactus

Hoodia gordonii, Hoodia Cactus

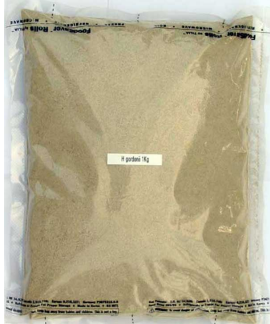

Hoodia Cactus kills the appetite and attacks obesity. It has no known side-effects, and contains a molecule that fools your brain into believing you are full.

Deep inside the African Kalahari desert, grows an ugly cactus called the Hoodia. It thrives in extremely high temperatures, and takes years to mature. The San Bushmen of the Kalahari, one of the world's oldest and most primitive tribes, had been eating the Hoodia for thousands of years, to stave off hunger during long hunting trips.

When South African scientists were routinely testing it, they discovered the plant contained a previously unknown molecule, which has since been christened P 57.

Loose Weight With Hoodia proudly offers FREE worldwide shipping on all orders over \$50 in value. All orders under \$50 will be shipped worldwide for only \$20.
